FREDZED - MAINSTREAMING LOW CARBON HOUSING IN WA

Snapshot

This project follows the design of two medium and high density developments in Perth as case studies to encourage the mainstreaming of low cost, low carbon housing in Perth.

Outcome

The intentions of FredZED and Brownlie are to provide working examples of scaled, affordable, innovative and sustainable housing in Perth that can demonstrate how a social housing provider has overcome barriers and created two model projects. Tangible demonstrations such as these will maximise the potential for knowledge transfer to other property developers, locally, nationally and globally, in the same way BedZED has impacted.

Engaged Communities

7. Living laboratories as low carbon lifestyle narratives

Project Leader

Prof. Peter Newman (Curtin)
