ISSUES IN DEVELOPMENT AND IMPLEMENTATION OF COMMUNITY-SCALE RENEWABLE ENERGY PROJECTS

Snapshot

Community scale renewable energy (wind farms) in Australia, Germany and other countries will be studied to understand what conditions help or hinder their expansion.

Outcome

Results of the study will be used to educate the public to increase the number of community renewable generated power. There will be flow-on benefits to businesses that manufacture and install RETs. Broader stakeholders such as governments at all levels, utilities, equipment vendors and project developers will also benefit from an improved understanding of this growing area of RE deployment and progress

Engaged Communities

6. Enhancing community engagement

Project Leader

A/Prof. Mark Diesendorf (UNSW)
m.diesendorf@unsw.edu.au

Partners

UNSW; UniSA

PROJECT START DATE: FEB-13

PROJECT DURATION: 3 YEARS
